

Airport Parking

Complete operations management

Total revenue control

Improve customer service

Retrieve vehicles faster

Use space efficiently

Reduce the stress your clients experience with zControl Airport Parking. We created zControl with airport parking management in mind so you get the product specifically designed for your airport operations.

Stage vehicles

Park vehicles according to their retrieval date. Park later retrieval day vehicles in the back of the lot or garage and save space up front for the more recent ones.

Vehicle retrieval

Enter return flight information into the system during the drop off using mPOS. Run the estimated retrieval date reports to park vehicles closer for the faster delivery.

Durable equipment

Built to survive severe environments and harsh handling, industry-leading Motorola™ MC75A lightweight mobile computers and Zebra™ mobile printers provide hours of trouble-free operation.

Improve customer satisfaction

Install vehicle request micro kiosks at the shuttle pickup locations and have customers scan their ticket before getting on the shuttle. Vehicle request will pop-up on the Jockey console screen or be printed on the runner stub printer. Once customer arrives to your lot or garage, vehicle will be ready for pick up.
