

Casino Parking

**Complete revenue control
with cashless transactions**

Increased patron satisfaction

**Full integration with Player's
Club Database**

Step your game up by implementing zControl Player's Card Club Parking into the casino parking operations. Your VIPs will never have to worry about paying for parking - they can charge it all on to their Player's Club Card.

Unique Integration

ZipPark's standard interface with your Player's Club Card Database allows your VIPs to pay for parking using their Player's Club card points.

Cashless transactions

Scan Player's Club Card upon entrance or exit to record the number. Parking charges will be collected by subtracting points from the Club Card when vehicle is requested. If points balance is not sufficient, patron will be asked to cashout using a different method.

Parking made personal

Upon the scan of the Player's Club Card, system will populate the information fields and allow your valets to greet returning customers by their first name.

Durable equipment

Built to survive severe environments and harsh handling, industry-leading Motorola™ MC75A lightweight mobile computers and Zebra™ mobile printers provide hours of trouble-free operation.

Increase customer satisfaction

Equip valets with handheld computers or install self-serve kiosks around the casino for the convenient guest check out. Combine casino and hotel integrations for the ultimate guest satisfaction.
