

Citation Pro

LPR based Parking Citation Processing

Easy Integration with Online Parking System (OPS).

Citation Pro software integrates with the OPS parking management system. It processes parking citations for any form of violation associated with a vehicle. By way of synchronizing with OPS, all the information pertaining to violations and white list vehicles are uploaded to the OPS database.

License Plate Registration Citation Pro uses number plate recognition software to automatically read the license plate. It notifies the user if the recognized license plate number is in permit violations. The Enforcement officer can also issue citations for violations of parking policy or traffic regulations.

Immediate Payment Processing

Optionally it can immediately process a payment for citation as soon as it is issued. The software can accept payment via secure credit card payment or cash.

Multiple Applications

Citation Pro offers two options:

- 1) In-vehicle notebook PC with multiple cameras mounted on vehicle. Officer on enforcement has the ability to capture license plates from one of all 4 cameras.
- 2) Hand-held computer based citation processing. This option allows the officer to patrol on foot to enforce parking and traffic violations.

Secure Payment Processing

Payment processing using secure E2E encryption provided by Six Card Solutions

User Features

- Traffic Violations
- Permit Violations
- Time parking violations
- GPS location stamp
- Multiple images of vehicle attached to citation

Features

- Hand held unit
- Vehicle mounted
- ANPR - Automated Number Plate Recognition
- LPR technology for more efficient enforcement
